The **HERCULES HURRICANE** – It Has No Equal

HERCULES Car Wash Systems – a name synonymous with **40 years of advanced engineering and reliability**, designs all its systems for low maintenance. Our worldwide reach, hardy warranties, available technicians, and reputation stand behind every installation.

With the most powerful system on the market and 5 times the number of water jets, the HURRICANE is still most Competitively Priced – for a profitable return on investment.

As the bar descends
the vehicle vanishes in
the **HURRICANE**

The suspended frame descends over the vehicle. Then in a flash of high-pressure, a torrent of water unleashes its power, **from 5 sides and through 82 jets.....** In just seconds... The van, the fantasy sports car , or fleet wagon alike... emerges from the cloudburst powered-**clean**, ... Several more seconds .. and the vehicle is **dry and gleaming**.

The Hercules water formula allows for a one-stage wash – eliminating the usual abrasive prewash soak of other systems. The environmentally sound HERCULES-formula – mixed with the hi-pressure water burst forth from **82 water jets** engulfing the vehicle in seconds. (Other systems, with about 17 jets take 3 times longer.) The rinse solution dries spot free – with no manual handling.

LESS IS MORE ... and Means Money Saved

Despite all that power, LESS water is used during the 90 second complete wash-rinse cycle than with any other system on the market ...LESS space is needed because the vehicle is stationary (it doesn't move back and forth along rails). LESS labor is expended ...one operator working alone can handle a considerably HIGHER VOLUME than ever before. And the **HURRICANE** can be adapted to any bay configuration.

HI-GLO WAX & SEAL

As an OPTION, for pennies per application: After the wash, a **Wax-Sealant** solution may be released with the touch of a button, encasing the vehicle in a protective hi-glow sealant that leaves a factory shine. Auto dealers are up-selling this option or build lasting good will by 'comping' the option. Fleet operators use this wax-sealant to protect a vehicle from air-borne pollutants, thus extending the finish's life.
